Left: From *Hybrid Thoracic Endovascular Aortic Repair via Right Anterior Minithoracotomy*. Schematic drawing of the procedure. A 5-cm incision at the third intercostal space to access the ascending arch. A partial occluding clamp is used on the ascending aorta to attach the 10-mm arm of the bifurcated 10/12-mm graft to the right common carotid artery (RCCA). The remaining arch vessels are bypassed through the RCCA-left common carotid artery (LCCA) and left subclavian artery bypass graft (BPG). Antegrade stenting of the

aortic arch is carried out through the RAM via the remaining 12-mm limb.
